

The Most Advanced Kiln Controller

Our new CU14 kiln control system enables complete and accurate control of your firings:

- ❑ Intuitive and user friendly touch screen interface
- ❑ Easy programmable time, temperature, ramp and atmosphere
- ❑ Comprehensive display of firing data including real time firing graph
- ❑ Seamless switching between full automation and manual control
- ❑ Unlimited storage of firing programs

All our control systems can easily be monitored and controlled over the internet.

Think, design, make

Blaauw Kilns works together with you in determining the best solution that fits your Educational Institute, Studio or Business. Based on your needs and ideas we start our design process. Once the design is optimized we manufacture the equipment tailored to your situation.

We have the solution, or we can create it!

The Dutch Kiln Builder

Why Choose Blaauw Kilns?

Blaauw has been building kilns for over 40 years, serving Artists, Educational Institutes and Businesses. We specialize in energy efficiency, smart cycling, computer control and we have a vast experience in the field of insulation and firing technology.

Why choose Blaauw Kilns ?

- ❑ Up to 80% more efficient than traditional brick kilns
- ❑ Fully automated oxidation and reduction firings
- ❑ Most advanced and user-friendly touch screen kiln controller
- ❑ Excellent customer support
- ❑ Each kiln built fit for purpose

If you are still not convinced, please ask one of our many satisfied customers !

Entrepreneurs

A Blaauw Kiln is the smart investment in your business. Why? It cycles 2-3 times in the length of a single traditional firing and uses the least amount of energy per cycle. Your output is increased and costs are lowered. Add the lifetime of the kiln and the extensive firing possibilities to this and the business case is clear. A Blaauw gives you that competitive edge you are looking for.

There are many funding options on the market for energy efficient gas appliances. We are happy to share our experiences with you.

Educational Institutes

With a Blaauw Kiln you are ready for ceramics in the 21st century. Your students can build understanding of traditional firing techniques using the kiln's manual mode. When making in the studio is the priority, use the full automation mode to make best use of student's and faculty's time. From reduction to full oxidation firings, your wish is the Blaauw's command!

Kiln programs can be individually titled and saved. The freedom of programming with our CU14 kiln controller allows you to research new firing phenomena or perform extensive testing.
